

# JEEVITHA S

Software Development Engineer I | Java Backend Developer | Spring Boot | Microservices

Tamil Nadu, India | +91-6382699457 | jeevithavjb1@gmail.com | Open to Relocation: PAN India

linkedin.com/in/jeevithamca | github.com/jeevitha1991 | Portfolio: jeevitha1991.github.io/jeevitha-portfolio

## PROFESSIONAL SUMMARY

Motivated Software Development Engineer (MCA 2025) with 4 months of professional hands-on experience architecting and delivering production-grade REST APIs, microservices, and secure backend systems using Java, Spring Boot, Hibernate/JPA, and PostgreSQL. Demonstrated ability to reduce API response time by 35% through query optimization and cut database load by 30%+ via Redis caching. Completed Learnbay Full Stack Software Development Master Course covering advanced Data Structures, Algorithms, System Design (HLD/LLD), and production-ready microservices architecture. Solved 300+ LeetCode problems across all major topics. Proficient in Spring Security with JWT authentication, RBAC, AES/SHA-256 encryption, CI/CD automation using GitHub Actions and Docker. Actively seeking SDE-1 / Software Backend Developer roles across India; open to relocation.

## TECHNICAL SKILLS

**Core Languages:** Java (primary), Python, SQL, JavaScript

**Backend Framework:** Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, REST APIs, JWT, RBAC, Microservices, Spring Data, Bean Lifecycle

**Database:** PostgreSQL, MySQL, Query Optimization, Indexing, ACID Transactions, Redis Caching, NoSQL, Database Design

**Build & CI/CD:** Maven, Gradle, GitHub Actions CI/CD Pipelines, Docker containerization, Automated testing

**Security:** JWT, RBAC, AES/SHA-256 Encryption, Spring Security, Identity & Access Management, OAuth2

**Messaging:** Apache Kafka (producer/consumer), Event-driven Architecture, Message Queues

**Cloud & Tools:** AWS (EC2, S3), Postman, Git, GitHub, Linux/Ubuntu, IntelliJ IDEA

**Testing:** JUnit, Mockito, TDD, Unit Testing, Integration Testing, Code Coverage

**System Design:** HLD/LLD, Data Structures & Algorithms (DSA), OOP, Design Patterns (SOLID, Factory, Builder, Decorator, Observer, Strategy)

**Data Structures:** Arrays, Strings, Linked Lists, Stacks, Queues, Trees, Graphs, Hash Maps, Heaps, Tries, Dynamic Programming

**Algorithms:** Binary Search, Sorting, BFS/DFS, Dijkstra, Greedy, DP, Backtracking, Pattern Matching (KMP, Rabin-Karp)

## PROFESSIONAL EXPERIENCE

**Software Development Engineer (Intern)-Strydo Technologies | Dec 2024 – Mar 2025 | On-Site, Bangalore**

**Java · Spring Boot · Spring Security · Hibernate/JPA · Redis · PostgreSQL · Maven · JUnit · GitHub Actions · Docker · Agile/Scrum**

- Architected and delivered production-grade REST APIs using Java and Spring Boot in an Agile/Scrum team environment; managed Maven builds across weekly sprints with successful deployments
- Implemented JWT-based authentication and RBAC authorization using Spring Security — secured all API endpoints against unauthorized access with token validation and role-based permissions
- Achieved 35% reduction in API response time (800ms → 520ms) through Hibernate/JPA entity optimization, lazy loading configuration, and PostgreSQL query indexing on frequently joined columns
- Integrated Redis caching layer with configurable TTLs, eliminating redundant database calls and cutting database load by 30%+ during peak hours
- Configured end-to-end GitHub Actions CI/CD pipeline for automated build, test, and deployment; containerized all microservices with Docker for scalable deployment
- Practiced Test-Driven Development (TDD) with JUnit and Mockito, achieving 85%+ code coverage; participated in peer code reviews and sprint retrospectives for continuous improvement

## KEY PROJECTS

### Food Ordering System

**Java · Spring Boot · Spring Security · Hibernate/JPA · PostgreSQL, JWT, Redis, Docker, GitHub Actions CI/CD | Jan – Mar 2026 (Capstone Project)**

- Built complete backend system with Spring Boot REST APIs covering user authentication(JWT + RBAC), cart management with real-time updates, order processing state machine, and inventory tracking
- Designed normalized PostgreSQL schema with proper relationships; optimized complex queries using Hibernate/JPA with eager/lazy loading; achieved <100ms API response time

- Implemented Redis caching for cart data, restaurant menus, and order history with automatic cache invalidation; reduced database queries by 40%
- Handled concurrency issues with ACID transactions to prevent double-charging and ensure order consistency; implemented idempotency keys for payment processing
- Containerized application with Docker; automated build-test-deploy pipeline with GitHub Actions CI/CD including unit tests and integration tests
- Implemented payment gateway integration with Stripe/Razorpay; handled error scenarios and retries gracefully

### Blockchain-Based Secure Application

Java · Spring Boot · Spring Security · AES/SHA-256 Encryption · MySQL · Hibernate/JPA · Maven |

### Course Project

- Designed enterprise-grade secure system applying JWT, RBAC, and AES/SHA-256 encryption providing end-to-end security architecture for sensitive data
- Applied SOLID design principles with factory and builder patterns; maintained clean architecture with clear separation of concerns (controller, service, repository layers)
- Implemented role-based access control with three tiers (admin, user, guest); used Spring Security filters for request authentication and authorization
- Full Maven lifecycle management including dependency management, testing, packaging, and deployment

### Flight Delay Prediction System

Python · pandas · Machine Learning · REST API · Redis · GitHub Actions CI/CD | Course Project

- Built ML-powered REST API achieving ~87% flight delay prediction accuracy using historical flight data and weather patterns
- Reduced repeated query time by 50% through Redis caching of frequently accessed predictions and data aggregations
- Deployed via automated GitHub Actions CI/CD pipeline with weekly release cycles

---

## EDUCATION

**Master of Computer Applications (MCA) - Sacred Heart College, Vellore | 2023–2025 | CGPA: 6.4/9.0**

Relevant Coursework: Data Structures, Algorithms, Database Management, OOP, Web Development, Software Engineering

**PG Diploma in Data Science (PGDDS) - Sacred Heart College, Vellore | 2023–2025 | CGPA: 7.3/9.0**

Relevant Coursework: Machine Learning, Statistical Analysis, Python Programming, Data Visualization

**Bachelor of Science in Mathematics - Thiruvalluvar University, Vellore | 2019–2022 | CGPA: 8.2/10.0**

---

## CERTIFICATIONS & ACHIEVEMENTS

- Full Stack Software Development Master Program - Learnbay (Completed Jun 2026) Certificate ID: 1262p9xh | Issued: 12/6/2026  
Coverage: Java Backend Development, Spring Boot, Microservices, SQL, DSA, System Design, REST APIs, Agile Development, CI/CD, Docker
- Solved 300+ LeetCode problems across Arrays, Strings, Dynamic Programming, Trees, Graphs, and advanced topics — demonstrating strong algorithmic foundation and problem-solving ability
- Built and maintained end-to-end CI/CD pipelines with GitHub Actions; hands-on Docker containerization experience for scalable deployments
- Portfolio Website: [jeevitha1991.github.io/jeevitha-portfolio](https://jeevitha1991.github.io/jeevitha-portfolio) showcasing all projects, skills, code samples, and open-source contributions
- Fluent English (written and spoken); experienced in Agile ceremonies, sprint planning, daily standups, and collaborative code reviews

## ADDITIONAL INFORMATION

- Open to Relocation: PAN India (Bangalore, Mumbai, Hyderabad, Chennai, Pune)
- Work Mode: Open to on-site, hybrid, and remote opportunities
- Notice Period: Immediate
- Languages: English (Fluent), Tamil (Native), Hindi (Basic)
